Viruses, trojans, keygens, cracks, serials, programs or any other script on our site which can harm your computer. Download. Also keep in mind that pirated software contains adware and usually other malicious software which may act as a potential threat to your system. Solaris 10, now known as "Solaris ZFS" is a file system developed at Oracle. This computer file system is the successor to the SunOS file system from Sun Microsystems. This page explains how to use ZFS. You can find more information about ZFS here. Visit the Sun Microsystems ZFS homepage for more information on ZFS and other Sun products and services. Sun ZFS writes the data to hard drives or to a storage area network that is attached to the system. The ZFS volumes are often called pools. ZFS is somewhat similar to other file systems such as NTFS, GPT and HFS/Open. It is also similar to the Btrfs project which Linux distributions are considering for inclusion in their kernels. ZFS can use a lot of disk space depending on the number of disks and/or volumes. However, ZFS has some advantages over other file systems. This includes the ability to recover from disk failures, easy and reliable raid-level mirrored and RAID Z volumes, snapshots, and mirror sets. The ZFS volume groups make it easy to increase the size of a pool by adding disks, and to increase the capacity of a volume by adding disks to a volume. ZFS allows automatic resizing of volumes and also allows zoned capacity, which allows disk space to
